### LIPHATECH joins the FRENCH FAB and thus strongly represents the French know-how in the design and manufacture of rodenticide bait

By joining the FRENCH FAB, LIPHATECH promotes French expertise in the design and manufacture of baits for the control of rodent pests.

Its industrial site located in Pont du Casse in Lot et Garonne since 2003, enjoys modern production tools. Its LT@PROCESS manufacturing lines are fully automated.

*"Designed by LIPHATECH's engineers in France, the paste line has been entirely transported to the American sister company for it to benefit from the French know-how"* explains Frédéric Mercier, Director of the production site.

Every year, LIPHATECH equips its industrial site with new technologies to reduce its environmental impact. *"To reduce our energy consumption, we have invested in a new cooling unit, a variable flow compressor, and changed all our lighting to LED. We are also putting in place tools to digitize documents, with the goal of achieving zero paper on the site within three years,"* he adds.

To accelerate the development of inventions, LIPHATECH has its in-house innovation lab dedicated exclusively to hardware, the WEFOUND™ fablab. An open space that operates in a way that is unprecedented in the company, as it is based on the sharing of skills: all employees are invited to participate in projects in partnership with external startups. LIPHATECH's collaborative approach and unique project mode operation have been rewarded by France Qualité (winner of the 2022 best practices award). LIPHATECH is certified ISO 9001 since 2002 and committed to CSR (confirmed level) since 2021.

#### About LIPHATECH

*Liphatech, subsidiary of the De Sangosse Group, (\$305m revenues, 850 employees, with headquarters located at Pont-du-Casse near Agen – 47), has been developing effective and innovative solutions for the control of rodents and termites for the past 50 years to protect goods, resources, and human health. With a world-wide presence, the company designs and manufactures products suited for both professional and customer markets. Liphatech keeps a sustainable commercialization process at the core of its concerns by promoting best practices and reducing its impact on the environment.*
